SWE 363: Web Engineering and Development (Term 192)
Homework Assignment #2 [Wednesday, March 04, 2020]

This assignment tests your understanding of basic HTML5, CSS3, JavaScript and JQuery [No server side programming]

Requirements:

Using HTML5, CSS3, JavaScript and JQuery to develop an interactive page for an online quiz.

The main page will contain the following items:

- The user interface should display a company logo (use KFUPM logo)
- A menu of available quizzes.

Once the user selected a quiz, he must provide his KFUPM ID and email address in a form in order to start the quiz. Use *form validation* and *regular expressions* to validate the user inputs.

The questions will then appear one at a time. Use at least 10 questions:

- 5 multiple choice questions with only one correct answer,
- 3 multiple choice with more than two correct answers, and
- 2 drag and drop questions to fill blanks.

Each group of questions is allocated a *time period* (say 5 minutes, 10 minutes, and 4 minutes, respectively). The examinee can go back and forth within each group of questions but not from one group to the other before the adjusted time period ends.

Once the user submits his answers, the system grades the questions and shows a report of his grade.

- 1) Total number of questions and percentage grade
- 2) Number and percentage of correctly answered questions in each group (shown as a pie chart)
- 3) Number and percentage of partially answered questions in the second group (shown as a pie chart)

The grade formula is as follows:

- 1) First group: one point for each correct question
- 2) Second group: one point for each correct choice and minus one point for each incorrect choice
- 3) Third group: one for each correct attempt and minus one for each incorrect attempt (limit attempts to 5 per question)

Finally, a copy of the report should be sent as a formatted email to the examinee's email.

Notes:

1. Create and use external style sheet
2. Create and use external JavaScript/JQuery

Submission

1. Create an account in CCSE server and publish your website there
2. Zip all the folder and name it **192-SWE363-Sec#-ID-Assignment2** (where Sec is your section and ID is your KFUPM ID), which include the HTML pages and the subfolders **images, styles, and code**. Submit through blackboard to your instructor.
3. Provide also the URL to access your website in an included readme file.

Due Date/Time

Homework is due at midnight on **Wednesday, March 04, 2020**. Furthermore, remember that you should not modify turned in work after the due time (unless informed otherwise by the instructor).

Grading

The work has to be yours and not copied from other sources. No cheating is allowed nor using other frameworks. Write clean code and follow good practices in structuring and developing the application. You must comment your code in all pages. Comments include a header comment at the top of the file, and comments within the code when a comment will help clarify the purpose of a line or section of code. You should also enter comments to explain where you found code that was not discussed in class.

These are the criteria we use to grade the homework:

- Folders and files have the required names and are uploaded to the location (that you provided its URL).
- Error-free according to the validation results (for HTML and CSS).
- Your files have comments at the top and as necessary interspersed in the code.
- The completeness and corrections of the application as described above.
- Creative design and appearance of the website with simple but elegant styling of the user interface and reports.
- The links are not broken, images (if used) have small sizes and been shown perfectly in the webpages.
